

# New Switched Pendant Outlet 250V

## Practical power at your fingertips

The new 56SPO Switched Pendant Outlet was designed with many built-in safety features. Its new positive acting slide switch means it cannot be accidentally switched on. The double pole design is another safety feature that also provides double pole switching for portable equipment applications. Ample wiring room is provided to give fast and easy installation.

As you would expect, the outlet has a built in hanging facility for chain suspension and is available in 250V 10A and 15A designs. The standard enclosure is chemical resistant making it suitable for processing plants. With the socket flap snapped shut the outlet guarantees full IP66 sealing, which is excellent for areas that are frequently washed down with detergents.

### Product features:

- Ample wiring room for quick fit off
- Neon to indicate 'power on' or 'power off'.
